System Description and Pricing Summary

1 SYSTEM DESCRIPTION AND PRICING SUMMARY

1.1 Details of machines driving and running the workload

1.1.1 Machine overview

The machine details were provided by Huawei Cloud.

Table 1.1: Machine Type and Location

Cloud provider	Huawei Cloud Services
Machine region	Beijing 4, availability zone 1
Common name of the item	ac8.48xlarge.4
Operating system	20.04.6-Ubuntu

This benchmark used two `ac8.48xlarge.4` instances, one for the driver and one for the SUT. This is shown in Figure 1.1.

Figure 1.1: Overview of benchmark setup

1.1.2 CPU details

The details below were obtained using the command `cat /proc/cpuinfo` (Listing A.1) issued from the machine instance and the datasheet of the used CPU type.

Table 1.2: CPU details summary

Type	AMD ®
CPU Family	25
Model	17
Total number	1
Cores per CPU	96
Threads per CPU	192
CPU clock frequency	2.40GHz
Total cache size per CPU	L1d cache: 3 MiB L1i cache: 3 MiB L2 cache: 96 MiB L3 cache: 384 MiB

1.1.3 Memory details

The total size of the memory installed is 768GiB and the type of memory is DDR4. This information was obtained using the `sudo lshw -c memory` command (Listing A.2) issued from the virtual machine instance.

1.1.4 Disk and storage details

The disk controller and motherboard types were not obtainable from the virtual machine instance. The storage consists of 1 x 1536GB Extreme SSD (configured as data disk), formatted with `ext4` filesystem and 1 x 345GB General Purpose SSD (configured as system disk). The storage size and type is from the Huawei Cloud Services website.¹

The 4KB QD1 write performance was measured with the `fio` command on the data disk and the output showed an average of 818.90 IOPS (Listing A.4).

1.1.5 Network details

The benchmark was run using two `ac8.48xlarge.4` instances. The `ac8.48xlarge.4` instances use the virtual Red Hat network adapter. This information was obtained using the `lshw -class network` command (Listing A.3).

1.1.6 Machine pricing

The system pricing summary is included in the table below. The pricing of the Huawei Cloud machine instance is the price for a 3×1 -year reserved dedicated instance machine without upfront payment.² The license fee for the GES database includes 24/7 enterprise support.

Table 1.3: Pricing summary

Item	Price
<code>ac8.48xlarge.4</code> reserved instance machine in Huawei Cloud (standard 3-year term)	425 819 RMB
License fee including 24/7 enterprise support fee (3-year term)	2 680 000 RMB
Total cost of ownership	3 105 819 RMB

1.1.7 System availability

The latest software version of the Graph Engine Service (GES), version 3.0.0, was made available on 2 August, 2024. This version was deployed to the machine described in this section.

2 DATASET GENERATION

2.1 General information

The Datagen configuration for SF10 is shown in Listing 2.1. The configurations for SF30, SF100 and SF300 are shown in Listings A.5–A.7.

Listing 2.1: Contents of `params-sf10.ini` used for scale factor 10

```
1 ldbc.snb.datagen.generator.scaleFactor:snb.interactive.10
2 ldbc.snb.datagen.serializer.outputDir:/disk/data/SF10
3 ldbc.snb.datagen.serializer.numUpdatePartitions:48
4
5 ldbc.snb.datagen.serializer.dynamicActivitySerializer:ldbc.snb.datagen.serializer.snb.csv.dynamicserializer.
  activity.CsvCompositeDynamicActivitySerializer
6 ldbc.snb.datagen.serializer.dynamicPersonSerializer:ldbc.snb.datagen.serializer.snb.csv.dynamicserializer.person.
  CsvCompositeDynamicPersonSerializer
7 ldbc.snb.datagen.serializer.staticSerializer:ldbc.snb.datagen.serializer.snb.csv.staticserializer.
  CsvCompositeStaticSerializer
8
9 ldbc.snb.datagen.serializer.dateFormatter:ldbc.snb.datagen.util.formatter.LongDateFormatter
```

2.2 Data loading and data schema

The output produced by the Datagen is pre-processed by a Python script to add the Person-knows-Person edges with swapped person ids as the edges are bi-directional. Then, the data is loaded into the database by bulk-loading the CSV files (see Listing A.8) using the schema defined in the `schema.json` (see Listing A.9).

Listing 2.2: Excerpt from `shcema.json`, describing the data schema

```
1 {
2   "type_id": 2,
3   "type_name": "COMMENT",
4   "properties": [
5     {
6       "property_id": 0,
7       "property_name": "id",
8       "property_type": {
9         "primitive_type": "INT64"
10      }
11    },
12    {
13      "property_id": 1,
14      "property_name": "creationDate",
15      "property_type": {
16        "date": "date"
17      }
18    },
19    {
20      "property_id": 2,
21      "property_name": "locationIP",
22      "property_type": {
23        "varchar": {
24          "max_length": 40
25        }
26      }
27    },
28    {
29      "property_id": 3,
30      "property_name": "browserUsed",
31      "property_type": {
32        "varchar": {
33          "max_length": 40
34        }
35      }
36    },
37    {
38      "property_id": 4,
39      "property_name": "content",
40      "property_type": {
41        "varchar": {
42          "max_length": 2000
43        }
44      }
45    },
46    {
47      "property_id": 5,
48      "property_name": "length",
49      "property_type": {
50        "primitive_type": "INT32"
51      }
52    }
53  ],
54  "primary_keys": [
55    "id"
56  ]
57 }
```

Data loading times are shown for each scale factor in the table below. Values were observed by executing the startup command of the SUT with timestamps from `moreutils` in the format `| ts '[\%Y-\%m-\%d \%H:\%M:\%S]'` and measuring the time between starting the service and when the service reported successful startup. The column **Loading time** contains the sum of the CSV loading and data preprocessing times.

Table 2.1: Data loading times

Scale factor	Loading time (s)
30	73
100	282
300	884

3 TEST DRIVER DETAILS

The software versions used are described below as well as the amount of read and write threads used by the driver.

Table 3.1: Summary of test artifacts and main configuration parameters

Driver version	v1.2.0	https://github.com/ldbc/ldbc_snb_interactive_driver/releases/tag/v1.2.0
Implementations version	v1.0.0	https://github.com/ldbc/ldbc_snb_interactive_impls/releases/tag/1.0.0
LDBC SNB specification version	v0.3.6	https://arxiv.org/pdf/2001.02299v3.pdf
Driver read threads	128	
Driver write threads	48	

3.1 Driver implementation

A test driver adaptation for the SUT was provided by the test sponsor and is available as part of the attachment package. The archive created from the version of the driver used for the audited run is included in the attachments of this report.

The SUT-specific test driver class `org.ldbcouncil.snb.impls.workloads.ges.interactive.GesInteractiveDb` extends the class `org.ldbcouncil.driver.Db` provided in the LDBC SNB Interactive driver package. Internally, the `GesInteractiveDb` relies on REST calls (HTTP) to communicate with the SUT.

3.2 Benchmark configuration

The driver applied time compression ratio (TCR) values of

- TCR = 0.0010 for scale factor 30,
- TCR = 0.0029 for scale factor 100,
- TCR = 0.0114 for scale factor 300.

The complete configuration files are shown in Listings A.10–A.12 and are also included in the attached supplementary materials.

4 PERFORMANCE METRICS

The performance metrics reported here show benchmark runs with scale factors 30, 100 and 300. In each case, the query on-time compliance is higher than the minimum required 95%. The performance summary tables below highlight key performance characteristics.

Table 4.1: Summary of results for scale factor 30

Benchmark duration	Benchmark operations	Throughput	Query on-time compliance
02h 01m 18s	274 968 913	37 775.91 $\frac{\text{operations}}{\text{second}}$	100%

Table 4.2: Summary of results for scale factor 100

Benchmark duration	Benchmark operations	Throughput	Query on-time compliance
02h 06m 48s	345 675 524	45 432.22 $\frac{\text{operations}}{\text{second}}$	98.45%

Table 4.3: Summary of results for scale factor 300

Benchmark duration	Benchmark operations	Throughput	Query on-time compliance
02h 03m 54s	299 967 535	40 347.04 $\frac{\text{operations}}{\text{second}}$	98.68%

During the benchmark run, the query executions shown in the tables below were observed using the different scale factors. Columns (except for Query and Total count) are showing duration values with microsecond (μs) precision. The notation P_i is used for the i^{th} percentile among all observed execution run times of a given query type. After each benchmark result table a table with the percentage of late operations per query type is shown.

Performance Metrics

Table 4.4: Detailed performance benchmark results for scale factor 30 in microseconds

5 VALIDATION OF THE RESULTS

The scale factor 10 data set was used for validating the correctness of the implementation over the SUT. The validation data set with 150 038 entries was created with the SNB Interactive reference implementation over Neo4j, which can be download from the LDBC Cloudflare R2 bucket¹. The system with the driver configuration shown in Listing A.13 successfully returned the expected result sets for the queries of the benchmark.

¹https://pub-383410a98aef4cb686f0c7601eddd25f.r2.dev/interactive-v1/validation_params-sf0.1-sf10.tar.zst

6 ACID COMPLIANCE

6.1 Transaction isolation level

The benchmark was executed using the *Read committed* isolation level setting of the SUT, which conforms to the minimum isolation level required by the SNB Interactive specification.

6.2 SNB Interactive ACID test results

The ACID test implementations were reviewed to conform to the ACID test specifications, with all specified test cases implemented. Furthermore, test execution was successful, passing the tests required for the *read committed* isolation level.

6.3 Recovery and durability

6.3.1 Recovery

Durability tests were run using the regular benchmark workload with scale factor 30, starting at 19:51 UTC. Both server machines were shutdown using the command `sudo shutdown -rf 21:51`, forced rebooting (ungracefully) both machines 2 hours after start of the benchmark, with 14 917 completed operations. The database server process was manually started again after the crash and it was ready in 17 seconds.

6.3.2 Durability

From the driver log, the last update operations before the crash were obtained using the commands below.

```

```

The log entries include the operation name, actual and scheduled start time, the execution time, the delay between scheduled and actual start times, and the initial query start time without the total compression ratio multiplier (which is shown in the last column). From the logs, the last completed updates were retrieved for each update. For the last update, the entry was incomplete due to the driver stopping while writing the log. The corresponding update was retrieved by taking the last complete update entry from the driver logs and using the CSV update streams to fetch the update. The query parameters were obtained from the initial CSV files generated by the Datagen using the initial query start time and the type number of the operation using the commands below.

```

```

To check whether the graph entities in the driver log entries were persisted in the database, custom read queries were executed after database restart. The queries returned the data that was committed according to the logs, so the system passed this check. These additional test queries are included in the supplementary materials.

Supplementary Materials

7 SUPPLEMENTARY MATERIALS

The table below shows the list of supplementary materials. These materials are made available with this full disclosure report to allow reproducibility of results.

Table 7.1: Supplementary materials

File	Purpose
results-sf{30,100,300}.tar.gz	Driver output files for the selected scale factors
console-output-sf{30,100,300}.txt	Driver console outputs for the selected scale factors
params-sf{10,30,100,300}.ini	Datagen parameters for the used scale factors
huawei_ges_1.0.0_amd64.deb	Linux installer package of database
ges_ldbc_snb	folder containing supplemental package
ges_ldbc_snb/Readme.pdf	Readme for the benchmark package
ges_ldbc_snb/server	Server files (SUT)
ges_ldbc_snb/server/dataconverter.py	Python script to add the knows edges bidirectionally in the personKnowsperson data.
ges_ldbc_snb/server/query_service/schema.json	Schema used
ges_ldbc_snb/server/query_service/bulk_load_path.json	Bulk load configuration
ges_ldbc_snb/server/query_service/config.json	SUT configuration
ges_ldbc_snb/server/query_service/lib	query service libraries
ges_ldbc_snb/server	Server files (SUT)
ges_ldbc_snb/client/durability_test	durability test files
ges_ldbc_snb/client/ges_acid_test	ACID test files
ges_ldbc_snb/client/ges_ldbc_snb_interactive_driver	GES LDBC SNB client implementation
